ABSTRACT OF THE DISCLOSURE
CREDENTIALER/MEDICAL MALPRACTICE INSURANCE
COLLABORATION

5

An inventive process is disclosed for linking credentialing information with a medical malpractice insurance application. The credentialing information is automatically transferred from the credentialing questionnaire to an insurance application, and this credentialing information is then used to generate a medical

10   malpractice insurance policy. The medical malpractice insurance policy is a two year policy, in order to coincide with the required re-credentialing of the healthcare provider. The inventive process also includes linking an information database, not created for insurance purposes, with an insurance application.
